

Tool Guide – Cewl

Introduction

Cewl is a custom wordlist generator designed for use in penetration testing. It spiders a target website, extracts words from the HTML content, and outputs them as a list, typically used for password cracking or social engineering.

Safety Disclaimer: Use only on networks and systems for which you have explicit authorisation. Unauthorized use of tools can be illegal, unethical, and harmful.

Setup and Launch

Step 1: Open Deakin Detonator Toolkit

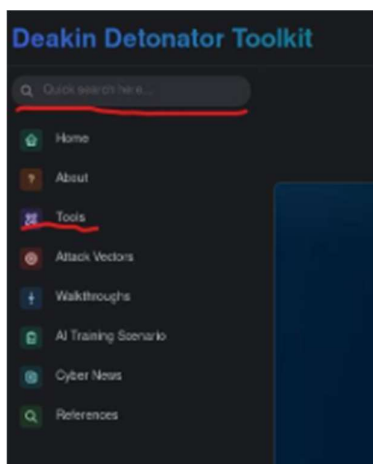

- a. Open Terminal in Linux
- b. Navigate to your Deakin Detonator Toolkit directory: (`cd ~/Deakin-Detonator-Toolkit`)
- c. Run DDT by using the following command line: (`yarn run tauri dev`)

```
File Actions Edit View Help
(kali㉿kali)-[~]
$ cd ~/Deakin-Detonator-Toolkit
(kali㉿kali)-[~/Deakin-Detonator-Toolkit]
$ yarn run tauri dev
```

Step2: Find Tool-example

- a. Click on Tools to the left (or use the quick search bar)

- b. If you clicked on Tools, scroll down and find Cewl and click go

Configuration and Usage

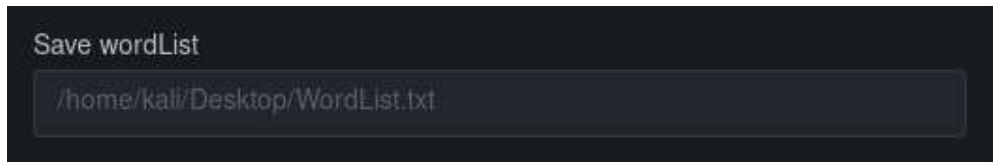

Step3: Configuring Cewl

Basic:

1. Enter the **Target URL** you want to crawl (e.g., <https://example.com>).

A dark-themed interface showing a label "Target URL" with a red asterisk. Below it is a text input field containing the URL "https://github.com/Hardhat-Enterprises/Deakin-Detonator-Toolkit".

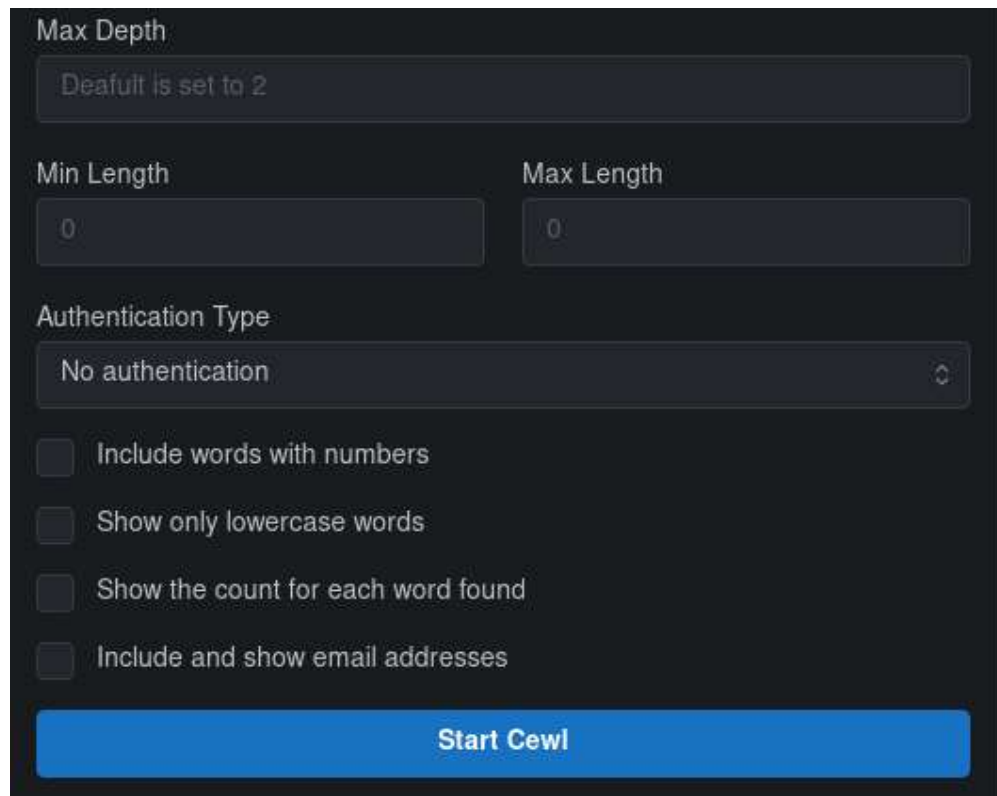

2. In **Save wordList**, choose where to store the output file (e.g., /home/kali/Desktop/WordList.txt).

A dark-themed interface showing a label "Save wordList". Below it is a text input field containing the file path "/home/kali/Desktop/WordList.txt".

3. Click **Start Crawl** to generate the wordlist using default settings.

Advance:

Toggle **Advanced Mode** to access extra options:

A dark-themed settings panel for the "Start Crawl" tool. It includes several input fields and checkboxes. At the bottom is a prominent blue button labeled "Start Crawl".

- Max Depth**: A text input field with the value "Default is set to 2".
- Min Length**: A text input field with the value "0".
- Max Length**: A text input field with the value "0".
- Authentication Type**: A dropdown menu currently showing "No authentication".
- Include words with numbers**: An unchecked checkbox.
- Show only lowercase words**: An unchecked checkbox.
- Show the count for each word found**: An unchecked checkbox.
- Include and show email addresses**: An unchecked checkbox.
- Start Crawl**: A large blue button at the bottom.

- **Max Depth** – How many levels of links to follow (default: 2).
- **Min Length / Max Length** – Restrict words to a certain length range.
- **Authentication Type** – Choose between:

- No authentication
 - Basic authentication
 - Digest authentication
(If authentication is selected, additional fields for credentials will appear.)
- **Include words with numbers** – Include words containing digits (e.g., pass123).
 - **Show only lowercase words** – Force all words to lowercase.
 - **Show the count for each word found** – Displays how many times each word appears.
 - **Include and show email addresses** – Extracts any visible email addresses from the target.

After adjusting your settings, click **Start Cewl**.

Step4: Results

The screenshot displays the 'Configure Cewl' web interface. At the top, there's a 'Show Disclaimer' button. Below it is a toggle for 'Advanced Mode' which is currently turned off. The 'Target URL' field contains 'https://example.com'. The 'Save wordList' field contains '/home/kali/Desktop/WordList.txt'. The 'Output filename' field contains 'output.txt'. There are two prominent buttons: a green 'Save Output To File' button and a blue 'Start Cewl' button. Below these is the 'Output' section, which shows a terminal-like display of the command '\$ cewl https://example.com -w /home/kali/Desktop/WordList.txt' and its successful execution. The output text includes 'CeWL 6.2.1 (More Fixes) Robin Wood (robin@dig1.ninja) (https://dig1.ninja/)' and 'Process completed successfully.'. A red 'Clear output' button is at the bottom of the output section.

Configure Cewl

Show Disclaimer

☐ Advanced Mode

Target URL *

https://example.com

Save wordList

/home/kali/Desktop/WordList.txt

Output filename

output.txt

Save Output To File

Start Cewl

Output

```
$ cewl https://example.com -w /home/kali/Desktop/WordList.txt
```

CeWL 6.2.1 (More Fixes) Robin Wood (robin@dig1.ninja) (https://dig1.ninja/)

Process completed successfully.

Clear output

Once the process is complete, the output area will display:

- **The exact Cewl command executed**
- **Tool version and author information**
- **Confirmation message:** *"Process completed successfully."*

Your wordlist will be saved to the location you specified.
