The Problem:

The tool guides have all been scattered amongst all platforms: GitHub, Teams files, and the DDT tool itself.

On the application, some of the guides uploaded have not been done completely or have been done very minimally, even though it had been marked as complete on the Content Dev Tools spreadsheet.

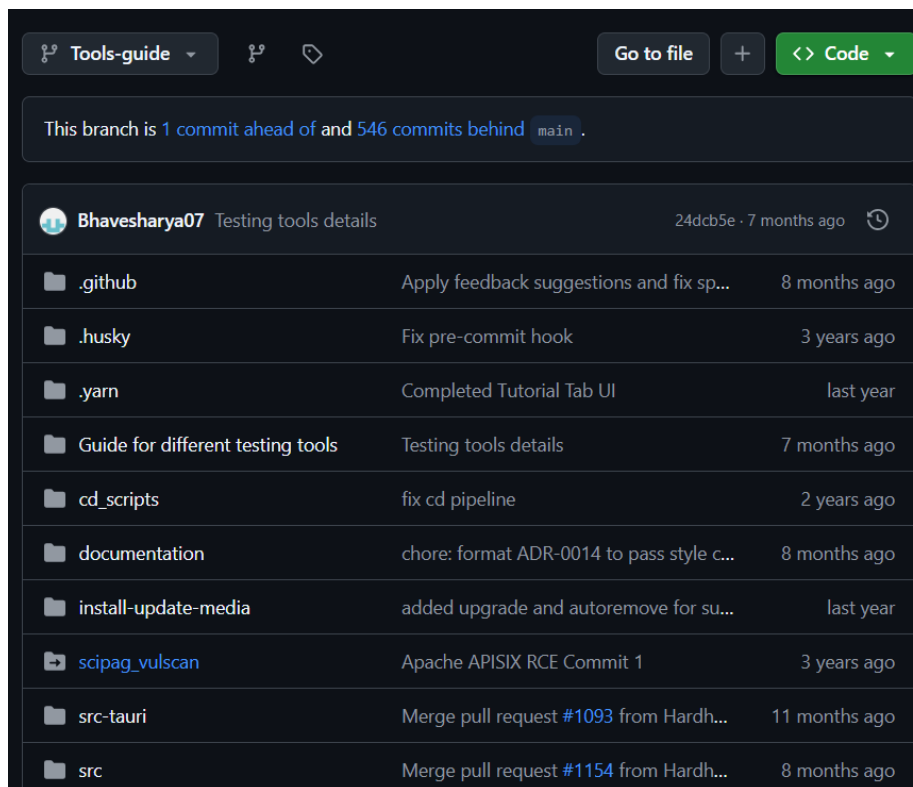

There are two separate branches labelled “tools-guide” and “Tools-guide” with two different set of files in them.

There have been instances where students have uploaded documentation of tool guides that already exist due to the fact that they had not seen other uploads.

The Current Layout:

GitHub:

“Tools-guide”

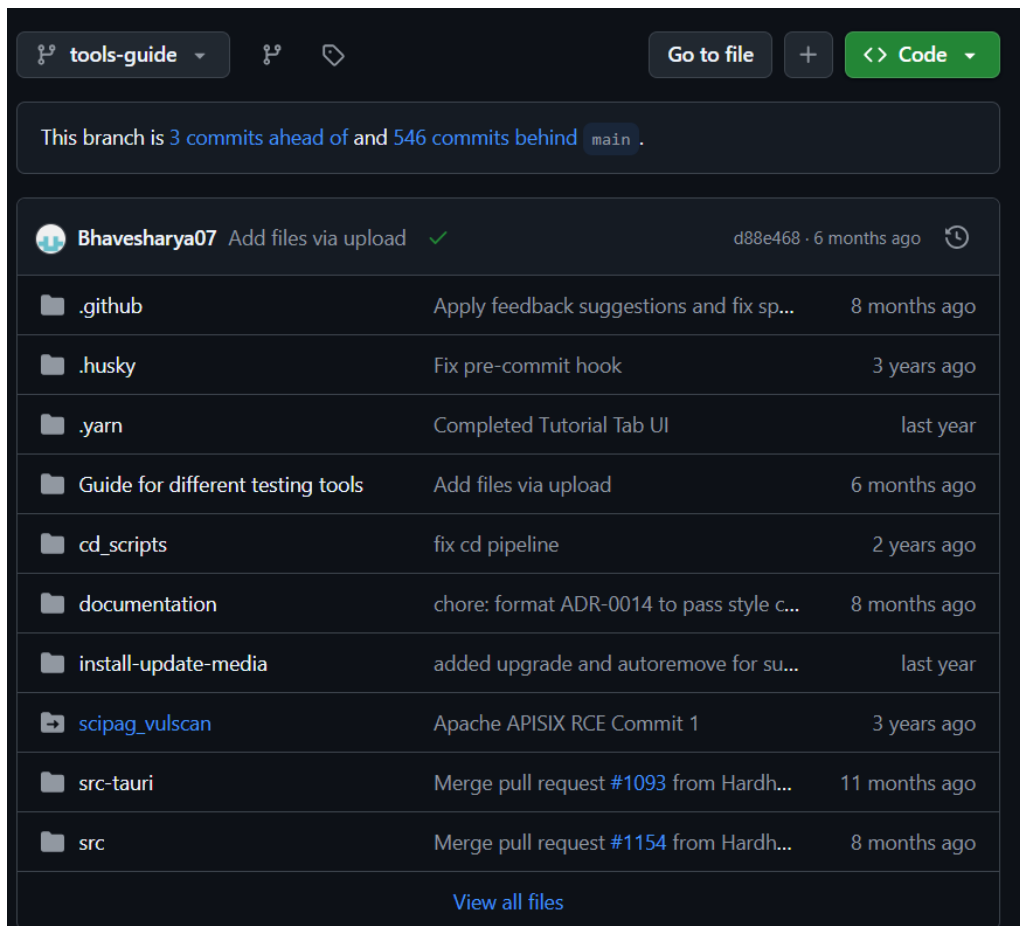

The guides in it (in folder “Guide for different testing tools”):

On the 6th of April 2025:

- Nmap
- OpenVAS
- Tcpdump

“tools-guide “

The guides in it:

On the **11th of April 2025:**

- ARP spoofing
- Burp Suite
- Gobuster
- Nikto
- Nmap
- OpenVAS
- SMB Enumeration
- Tcpdump

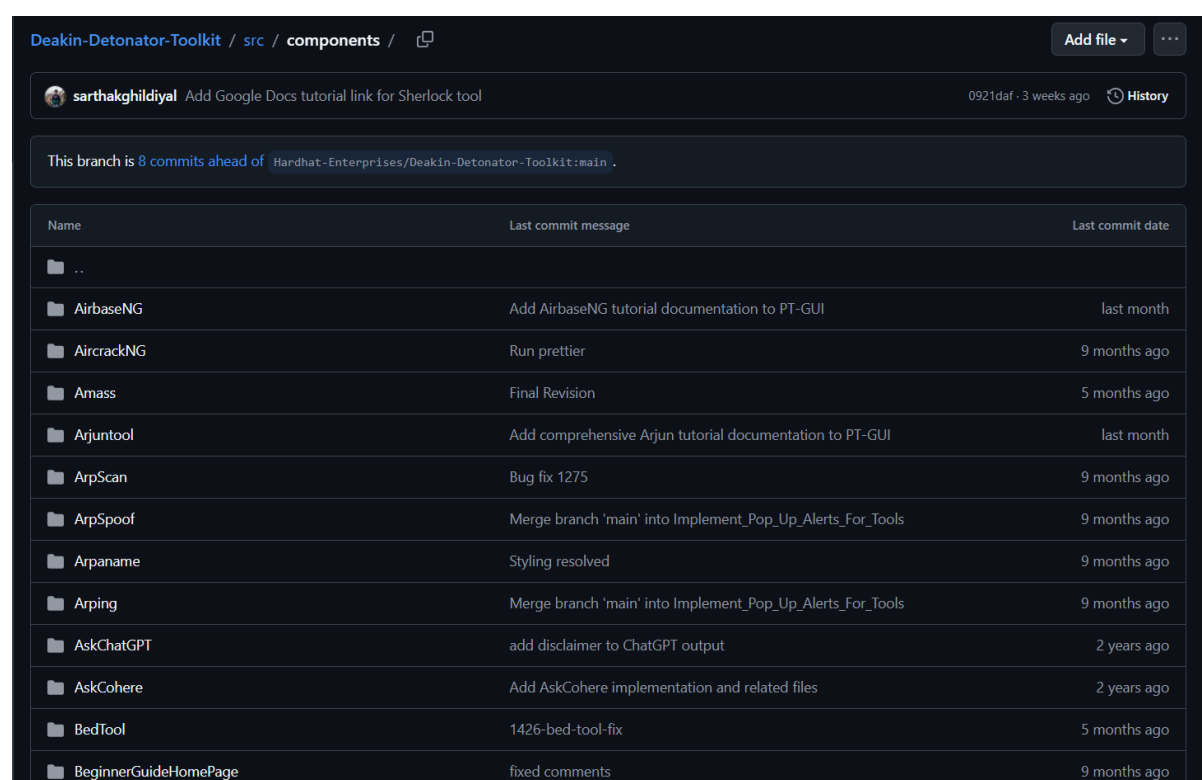

- Tool guide

The last one is a document merged with all the documents above it.

The documents in both “tools-guide” and “Tools-guide” are PowerPoint presentations.

“docs-add-missing-tutorials”

Some students have added google doc tutorial links within the code for the displayed tutorial section within DDT (I’m assuming) as these files are part of the components folder where the code for each tool is written.

Name	Last commit message	Last commit date
..		
AirbaseNG	Add AirbaseNG tutorial documentation to PT-GUI	last month
AircrackNG	Run prettier	9 months ago
Amass	Final Revision	5 months ago
Arjuntool	Add comprehensive Arjun tutorial documentation to PT-GUI	last month
ArpScan	Bug fix 1275	9 months ago
ArpSpooF	Merge branch 'main' into Implement_Pop_Up_Alerts_For_Tools	9 months ago
Arpaname	Styling resolved	9 months ago
Arping	Merge branch 'main' into Implement_Pop_Up_Alerts_For_Tools	9 months ago
AskChatGPT	add disclaimer to ChatGPT output	2 years ago
AskCohere	Add AskCohere implementation and related files	2 years ago
BedTool	1426-bed-tool-fix	5 months ago
BeginnerGuideHomePage	fixed comments	9 months ago

The last commit read that the google doc links have been updated on the **26th of January 2026** on:

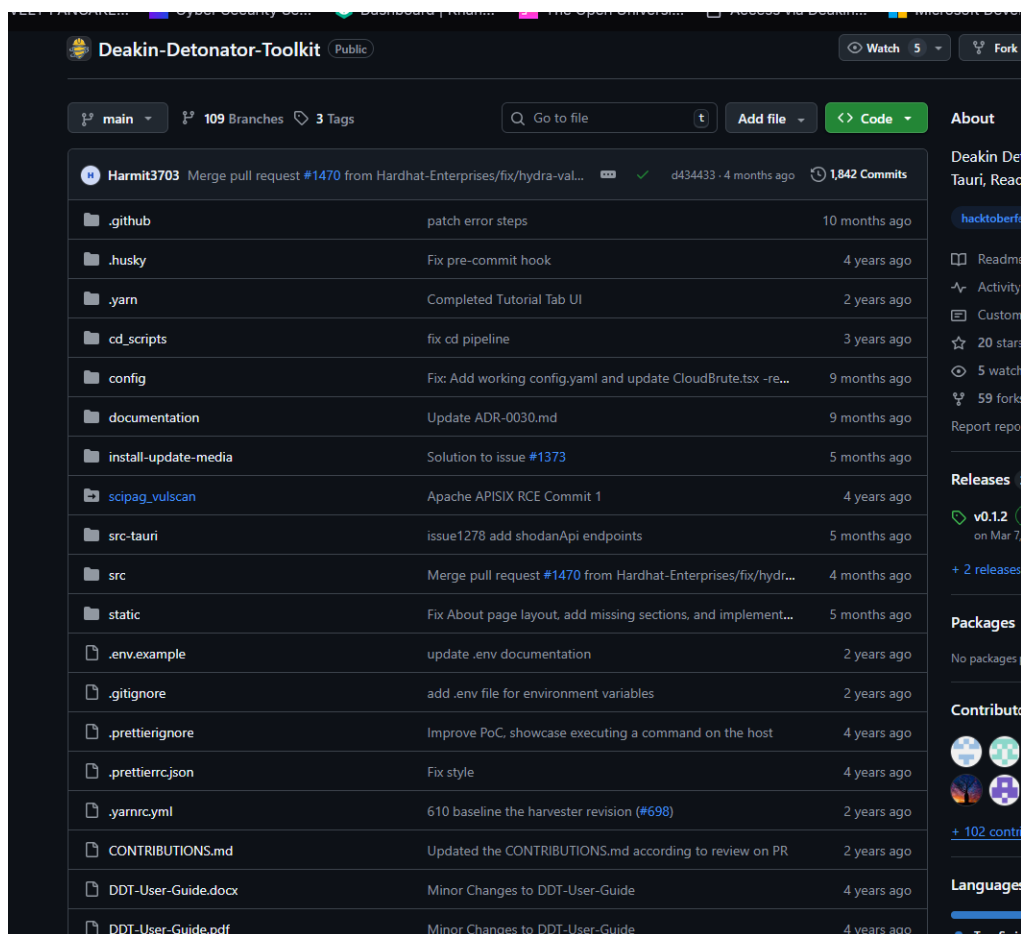

- Bully
- Photon
- Sherlock

However, according to what I can see on the application, none of those tools have tutorials uploaded, most probably they still need to be linked up properly.

The rest of the tools' last commit messages were for other purposes.

The DDT user guide

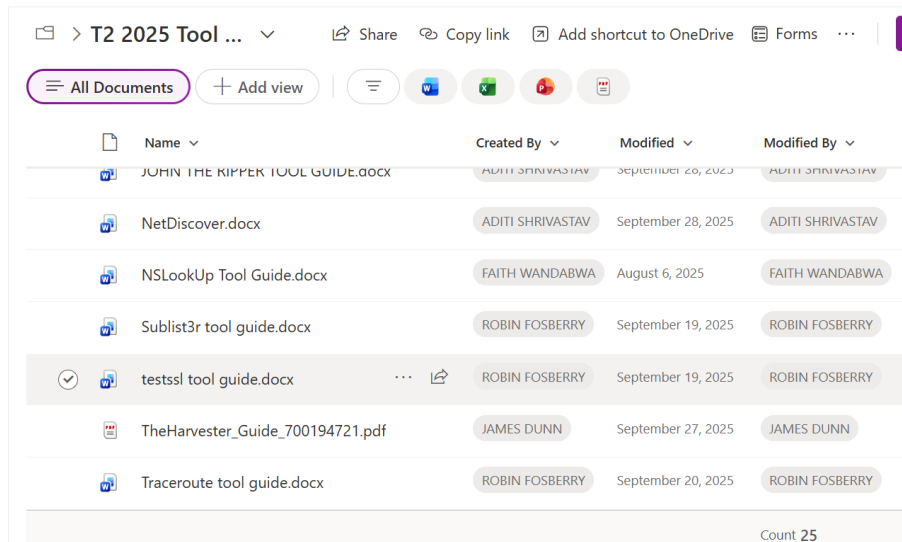

Moreover, the last time the actual user guide for the whole DDT application had been updated or reviewed were on the 3rd October 2022:

Teams files:

Tutorial documentation for the tools only exists in the [T2 2025 Handover Documents folder](#).

T2 2025 Tool Guides:

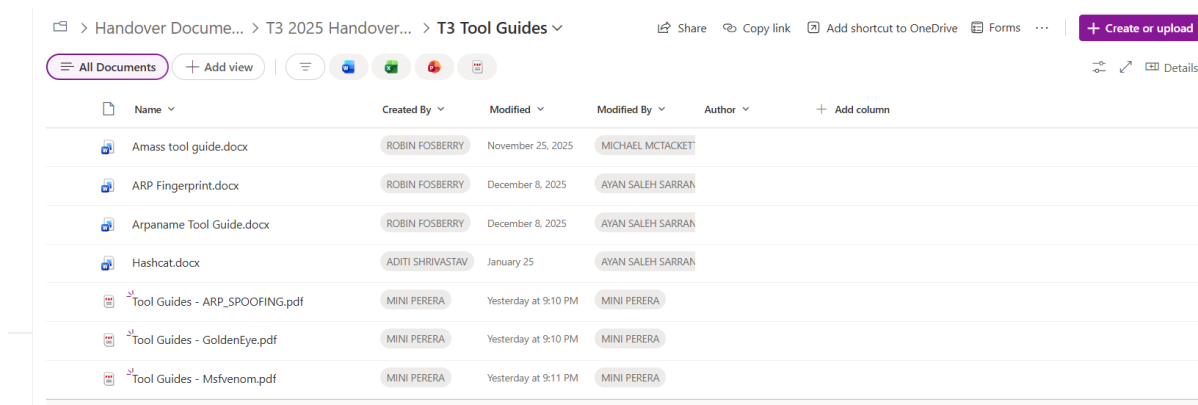

Name	Created By	Modified	Modified By
JOHN THE RIPPER TOOL GUIDE.docx	ADITI SHRIVASTAV	September 28, 2025	ADITI SHRIVASTAV

73 Nmap	Beginner	To Do				
74 Nmap	Beginner	To Do				
75 Nmap	Beginner	To Do				

This is not completely reflective of what is uploaded on Github, the Teams files, and the DDT tutorial application.

List of all the Tools (in its respective categories):

There is currently a total of **74 tools** in the DDT application.

I. Attack Tools

➤ ARP Spoofing

- GoldenEye
- Msfvenom

II. File Analysis and Recovery

- Foremost
- Metagoofil

III. Information Gathering and Analysis

- Amass
- BED
- Dmitry
- DNSenum
- DNSMap
- DNSRecon
- Exif
- Gitleaks
- Photon
- Sherlock
- The Harvester

IV. Miscellaneous

- FTPconnect

V. Network Scanning and Enumeration

- ARP Fingerprint
- Arping

- ArpScan
- Bully
- Dig
- Enum4Linux
- Hping3
- Masscan
- Nbtscan
- Netcat
- NetDiscover
- Nmap
- Nslookup
- SMB Enumeration
- SNMPCheck
- Tcpdump
- Testssl
- Traceroute
- Unicornscan
- Urlsnarf
- Wifite2

VI. Password Cracking and Authentication Testing

- AircrackNG
- Cewl
- Crunch
- Fcrackzip
- Hashcat

- Hydra
- JohnTheRipper
- Rainbowcrack
- Rtgen
- Rtsort

VII. Vulnerability Assessment

- Crackmapexec
- Nuclei
- SearchSploit
- Shodan API tool
- SMB-Ghost Scanner
- Sqlninja
- Tiger

VIII. Web Application Testing

- Arjun
- Arpaname
- Eyewitness
- FFuf
- GoBuster
- Gyoithon
- Nikto
- Parsero
- SlowHttpTest
- SQLmap

- Subjack
- Sublist31
- Wafw00f
- WhatWeb
- Whois
- WPScan

IX. Cloud Security and Reconnaissance

- CloudBrute

X. Wireless Attacks and Rogue Access Point

- Airbase NG

Completed Actions:

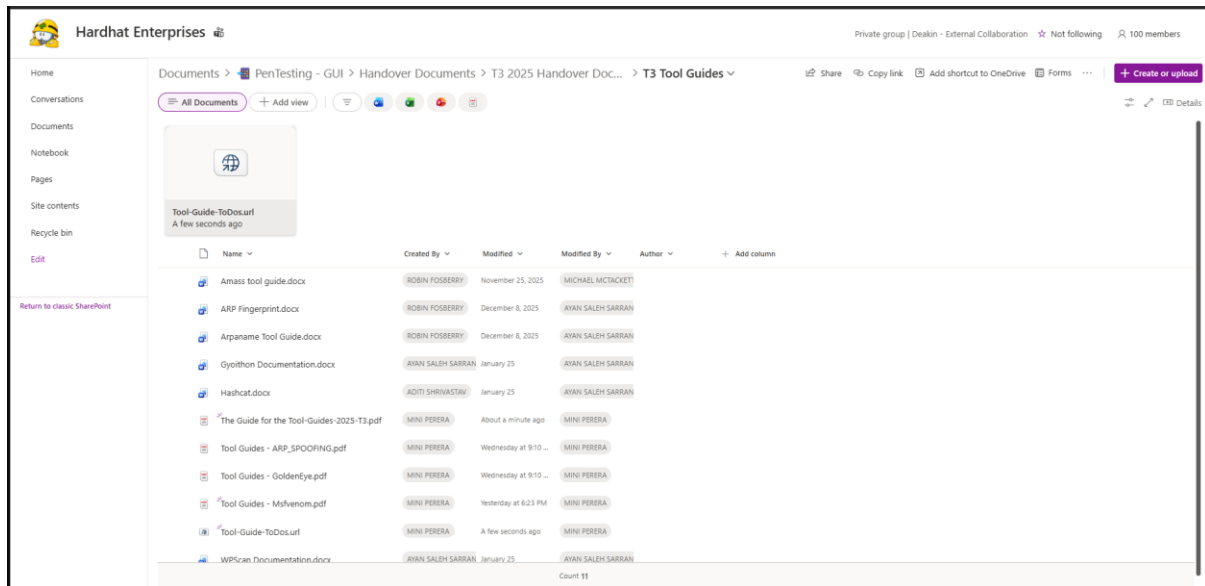

New Content Dev Table using Notion:

As Name	Uploaded to DDT	Tool-Generator version	Tutorial (Teams)	Category	Feedback
Airbase NG	Empty	Not Started	In progress	Wireless Attacks and Rogue Access Point	
Aircrack NG	Empty	Not Started	Done	Password Cracking and Authentication Testing	
Amass	Empty	Not Started	Done	Information Gathering and Analysis	
Arjun	Empty	Not Started	In progress	Web Application Testing

Tool-Guide-ToDos.url	MINI PERERA	A few seconds ago	MINI PERERA	
WPScan Documentation.docx	AYAN SALEH SARRAN	January 25	AYAN SALEH SARRAN	

Proposals:

- ✚ I suggest that in the next semester we work on centralizing the tutorial guides into one folder on the main DDT repository so as to not bring about confusion and to improve efficiency. The main “[PenTesting – GUI](#)” needs some housekeeping.
- ✚ The Teams files should be organized a bit more to improve navigation for future cohorts.
- ✚ The students should be briefed at the start of the trimester on where all important documents are.
- ✚ ~~Update the Content Dev spreadsheet to improve accuracy.~~
- ✚ Use the new [tool guide generator](#) for future tools and update all the current documents with the same template used in the tool generator.
- ✚ I suggest adding the tool categories in the template created in the tool generator for further accuracy and cohesiveness with the DDT layout.

- 📺 Create a quick video tutorial on how to navigate notion in Week 1 (ASAP) of T1 2026.
